Vaisala France and GWU-Umwelttechnik announce the constitution of a global network of Lidar Service Centers

Vaisala France, doing business as Leosphere, the global leader in Lidar technology, is proud to announce, together with German-based partner GWU-Umwelttechnik (GWU), the constitution of a global network of Service Centers dedicated to its full suite of Lidar solutions.

In addition to Vaisala France's own Service Center in France, the first local center is already in place for Germany and Austria with GWU since 2015. With a rapidly growing fleet of over 1500 Lidars in more than 80 countries at beginning of 2020, these regional Service Centers improve the performance and efficiency of Lidar maintenance and repair services as well as the group's ability to train customers across a wide spectrum of industries in the best use of their powerful Lidar technology.

By ensuring the application of state-of-the-art techniques, implementing common quality standards, and sharing information and customer feedback, the partners provide long-term value protection of their clients' assets and offer high value-added services for dedicated market segments.

In addition to that external operational Service Centers, Vaisala France global network is currently constituted by four other service centers.

About Vaisala France

Vaisala France, doing business in Wind Energy as Leosphere and member of Vaisala Group, is a global leader in LIDAR (laser radar) atmospheric remote observation in several markets such as Wind Energy, Weather and Climate, Aviation Weather, Air Quality & Industrial Risk. The company develops, sells and services new turnkey remote-sensing instruments allowing wind measurement and aerosol detection. Vaisala France has deployed onshore and offshore more than 1500 LIDARs throughout the world in severe environments with the same concern of reliability, reduction of operational costs for clients and dedication to atmospheric hazards control. About GWU

GWU-Umwelttechnik GmbH (GWU) supplies sensors and systems for wind and wind profile measuring, as well as meteorology applications. With many years' technical experience, our meteorologists, scientists, engineers and technicians develop customized measuring solutions, including sensors, system integration, remote monitoring and data storage and processing. GWU is certified according to ISO 9001:2015 and has as its objective to meet the increasing requirements of measurement tasks in the field of wind energy by making practical use of the latest technologies while remaining focused on the issue at hand and the customer. Measuring wind profiles using innovative LiDAR technology (Light Detection and Ranging) is gaining importance and acceptance within the wind energy sector. GWU is the sales and service partner of LiDAR global market leader Vaisala France. Learn more at www.gwu-umwelttechnik.de
